

# 3D Greenhouse

1 Cut the A die twice to create the front/back and side pieces. Cut four of the B, C, and E dies, and six of the D die.

2 Fold the centre line of the A die cuts to make two L shaped sections. Stick together using the tabs to create the walls of the greenhouse. The connectors around the doors can be snipped to allow them to open.

3 Slot two of the B die cuts into the greenhouse using the hooks either side, connecting front to back. Slot the four E die cuts into the slits along the B die cuts, to brace the die cuts against the walls of the greenhouse.

4 Slot the remaining two B die cuts into the top of the greenhouse to create the roof beam.

5 Slot the four C die cuts into the top of the greenhouse, connecting the tops of the walls to the roof beam.

6 Stick the D die cuts to the top of the greenhouse, either side of the roof beam in pairs.
