

3D Miniatures Martini Glass

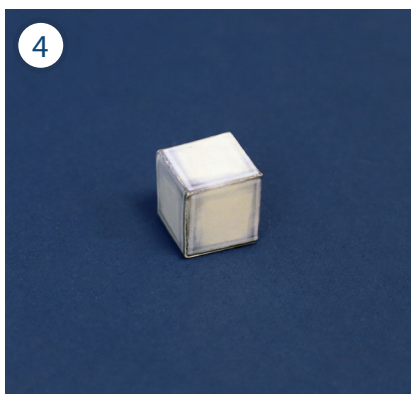

1 Cut dies A - F once each (including both E dies).

2 Score and fold up the B die cut to create the stem. Secure using the long tabs.

3 Fold up and assemble the top of the glass (A die cut) and the base (C die cut). Stick onto the glass stem, using the stem's tabs on either side.

4 Fold up and secure the F die cut to create the ice cube.

5 Stick the solid yellow sections onto the inside of the lemon slice to cover the holes. Fold up and secure the D die cut to create the lemon slice, ensuring the tabs are inside the shape before securing. Use the ice cube and lemon to decorate your glass.

Top Tip:

Create two glass halves using these steps and mat together to create a full 3D glass.
