

Arbour

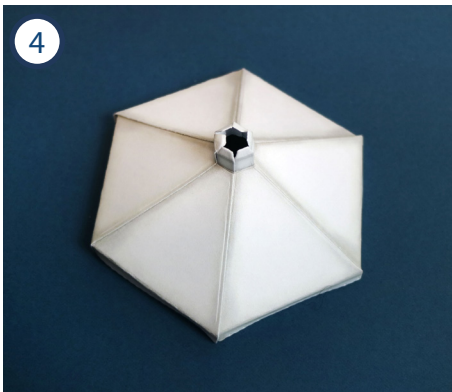

1 Cut three of the A and B dies. Cut one C, two E, and six of the D die.

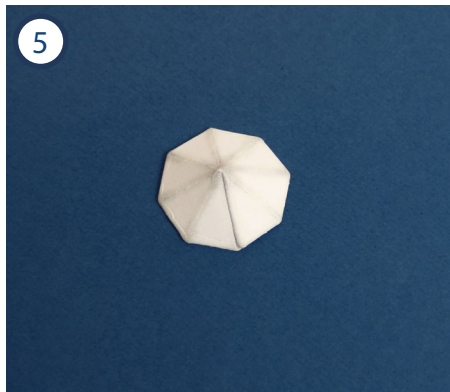

2 Stick the A and B die cuts together using the tabs. Alternate the die cuts and stick together until you create a closed hexagon.

3 Stick onto the base (E die cut) using the bottom tabs.

4 Stick the D die cuts onto the other E die cut. Place each piece with the bottom tab overlapping the hexagon's edges, then stick each section overlapping the last using the side tab, until you have the roof as shown. Fold back the small section on each peak to create the top of the roof, protruding upwards.

5 Close the C die cut using the tab to create a small peak as shown.

6 Place the roof on top, or secure with tape or glue if desired.

Arbour

Finish by sticking the final roof piece on top.
