

# HOW TO USE THE... 3D SNOWFLAKE

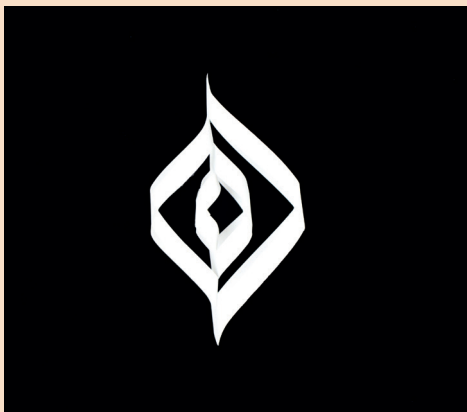

1. Cut 6 sections from your chosen paper or lightweight cardstock. Place one square on your work surface in a diamond position, pop the other five to one side. Take the outer points and roll them into the centre, secure together with super sticky tape.

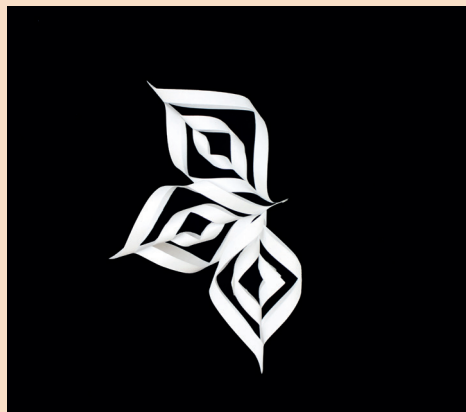

2. Flip the section over and roll the next points towards the centre, secure as per step one.

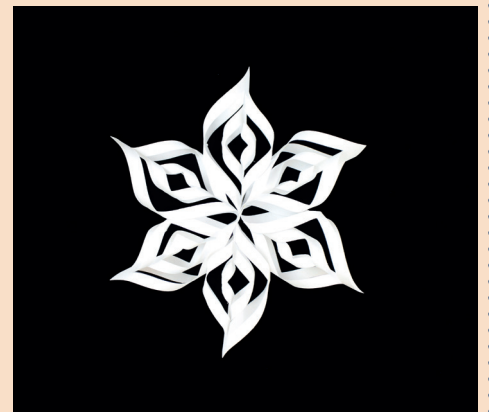

3. Repeat step two with the next points as shown.

4. To finish the gluing secure the two centre points in the same direction as the points in step two.

5. Repeat steps 1-4 with the other five sections. Secure three together by gluing the outer left curl of one section to the outer right curl of the next.

6. Glue the two halves together to complete the snowflake.
