

HOW TO USE... THE FLECTERE 3D CUTTING SYSTEM TO MAKE YOUR OTHER DIES, FLECTERE DIES!

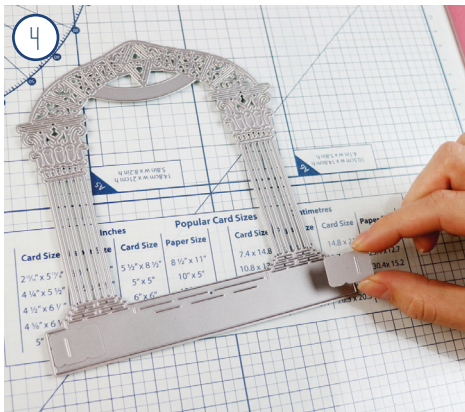

1. Cut, score and fold your chosen colour cardstock to create the desired size card.

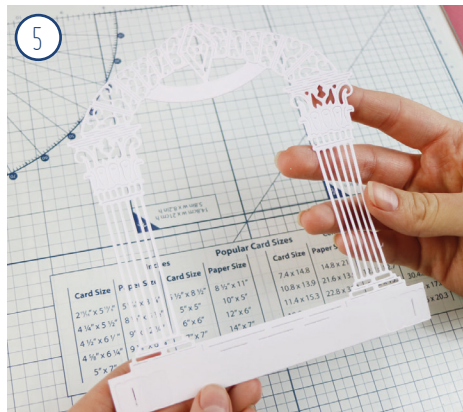

2. Using the Flectere Cutting System die set, slot die, line the die up with the bottom edge of the card and cut to create the slots for the Flectere dies.

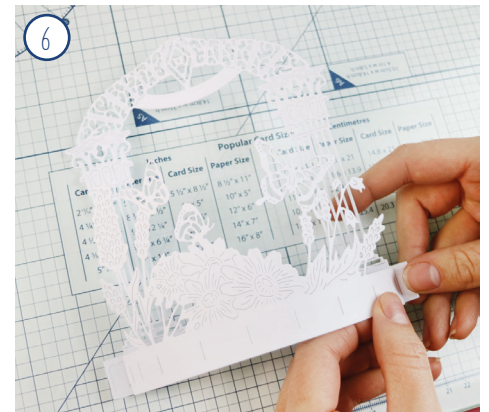

3. Using your desired Flectere die, cut one from your chosen cardstock. Gently slot the tabs of the die cut into the slits in the base card.

4. Another way of using the Flectere Cutting System is by using the individual slot dies on the bottom of the Flectere Pillars die. Place the individual slot dies into the bottom section of the Flectere Pillars die as shown and secure in place.

5. Run the dies through the die cutting machine to create slits in the bottom of the Flectere Pillars die cut.

6. Using your desired Flectere die, cut one from your chosen cardstock. Gently slot the tabs of the die cut into the slits on the Pillars die cut to create a Flectere story.
