

INSTRUCTIONS

TO EMBOSS

1. Attach the grid to your parchment paper with low tack tape.
2. With your parchment paper on top of the grid and using your embossing tools, 'trace' the design areas you wish to emboss.

TIP: Do not press too hard, emboss the design multiple times to gain whiteness.

TO PERFORATE

1. Keeping the embossed parchment in place, turn over the grid and with the grid uppermost and the parchment paper underneath, perforate shallowly with a single needle tool. Alternatively, remove parchment paper and re-position face up on top of the grid.
2. When all shallow perforating and embossing is complete, remove parchment and re perforate fully to increase the size of the hole, making it easier to snip and improve the appearance.
